31 # Has this week been productive?
32
33 A week ago, I promised myself that I would spend this week even more productively than last week. I hope I
34 managed to do it.
35
36 This week I was still very busy studying. I did a lot of homework 📖, worked in classes at the university 🎓,
37 studied additional material 📚.
38
39 Of course I did not forget about the rest. I managed to watch a couple of episodes of my favorite TV show 📺,
40 read a little 📖 and meet with friends 🍷.
41
42 However, this was not enough for me to feel good, this week I felt very stressed and tired. Therefore,
43 I hope that next week I will be able to distribute time both to study and to rest in order to feel better.
44
45 # In general,
46
47 spring has finally come! 🌸🌻🌞 We should leave the house more often and go out with our loved ones. But we can do
48 this only after all the cases are finished.
49
50 That is why I hope that next week will be no less productive and interesting.

31 Markdown is a lightweight markup language for creating formatted text using a plain-text editor. John Gruber and
32 Aaron Swartz created Markdown in 2004 as a markup language that is appealing to human readers in its source code
33 form. Markdown is widely used in blogging, instant messaging, online forums, collaborative software, documentation
34 pages, and readme files.
35
36 # Basic information about Markdown:
37
38 To create a title, use the sign ( # ), for example, look above! Do you see big text? It is the title!
39
40 To make the text bold, enclose it in double asterisks.
41
42 To set an italic font for the text, enclose it in single asterisks.
43
44 To set bold and italicized text, enclose it in triple
45 asterisks.
46
47 The bulleted list can be formatted using asterisks or dashes:
48
49 - yes.
50 - it is a fact.
51
52 The ordered list can be formatted using the appropriate numbers:
53
54 1. Don't you believe me?
55 2. See for yourself.
